Progress Report

Bardia Mojra

August 13, 2021

Robotic Vision Lab

The University of Texas at Arlington

1 Specific Research Goals

- VPQEKF: Write and submit paper by September 14th (ICRA)
- AFRL Proposal:
- NBV-Grasping.
- Universal pose estimation or a novel and superior approach.

2 To Do

- Catch up on my reading list.
- PVQEKF:
  - Keep improving and debugging the QEKF code.
  - Develop object tracking and robust-to-truncation feature.
  - Get ROS environment up and running. – Next: test header include bug theory.
- AFRL: Controls and DNN research.
- Real-time pose estimation demo.
- NBV-Grasping:
  - Update URDF and Xacro files for UR5e to include sensor, sensor mount (with offset), and the gripper. – Next
  - Add movement constraints for tables and scenes.
  - Write two IK functions for gripper and sensor, one for each. It should plug-in with MoveIt configurator.
  - Research and implement point-cloud data to training TensorFlow models.
  - Learn and implement GraspIt package.
- MSI Fellowship: On pause.

3 Reading List

- Vision-based robotic grasping from object localization, object pose estimation to grasp estimation for parallel grippers - a review [1] - On-going.
- Leveraging feature uncertainty in the pnp problem [2].
- Normalized objects [3].
- Berk Calli's YCB [4].
- NASA papers [5].
- Roadmap [6].

4 Progress

The following items are listed in the order of priority:

- VPQEKF: This week, I mostly worked on the QEKF project and I am still getting inconsistent results. Figure 1, shows measurements vs. estimated translation where estimation moves in the opposite direction. Figure 2 shows translation measured and estimated values for the first 15 steps and it appears and it turns early on in the navigation process. Figure 3 shows full state measurements vs. estimations for QEKF.

  Figure 1 shows translation measurement (z) vs estimate (x-$post$) translation in 3D. Figure 2 shows translation measurement (z) vs estimate (x-$post$) in 3D for the first 15 samples. Figure 3 shows all measurements vs estimations.
- AFRL: I think I would be most excited about combining controls and DNN methods for perception, odometry, navigation or manufacturing applications.
- NBV Grasping Project: No update.
- NASA MSI Fellowship: Need to read more NASA papers. – On pause.
- PyTorch Tutorials: Transfer learning.
- Pose Estimation: On pause.

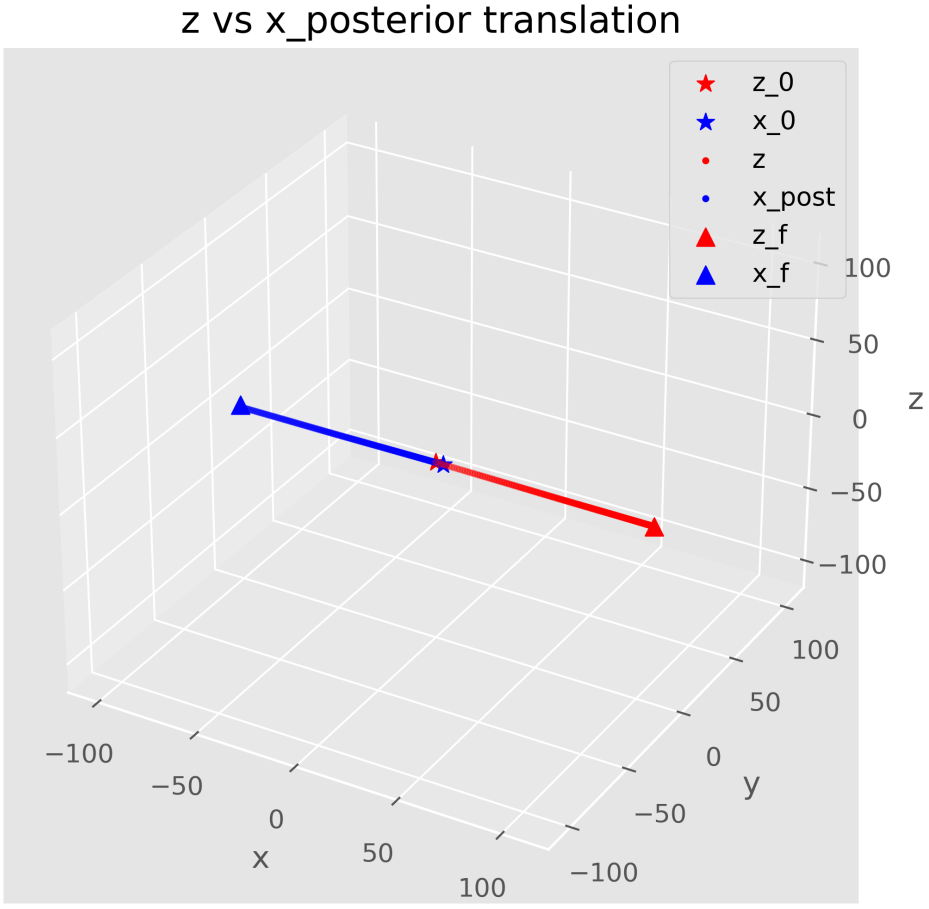

Figure 1: KITTI 001 - Measurement vs Posterior Est. Translation.

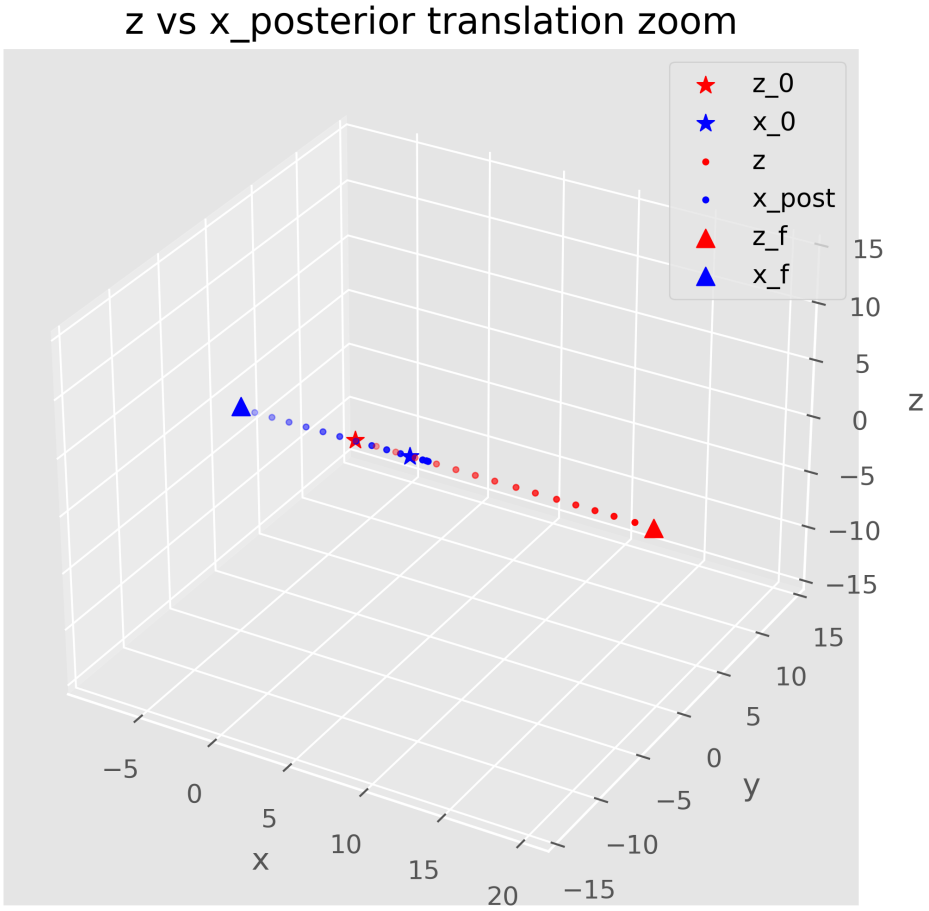

Figure 2: KITTI 001 - Measurement vs Posterior Est. Translation Zoom.

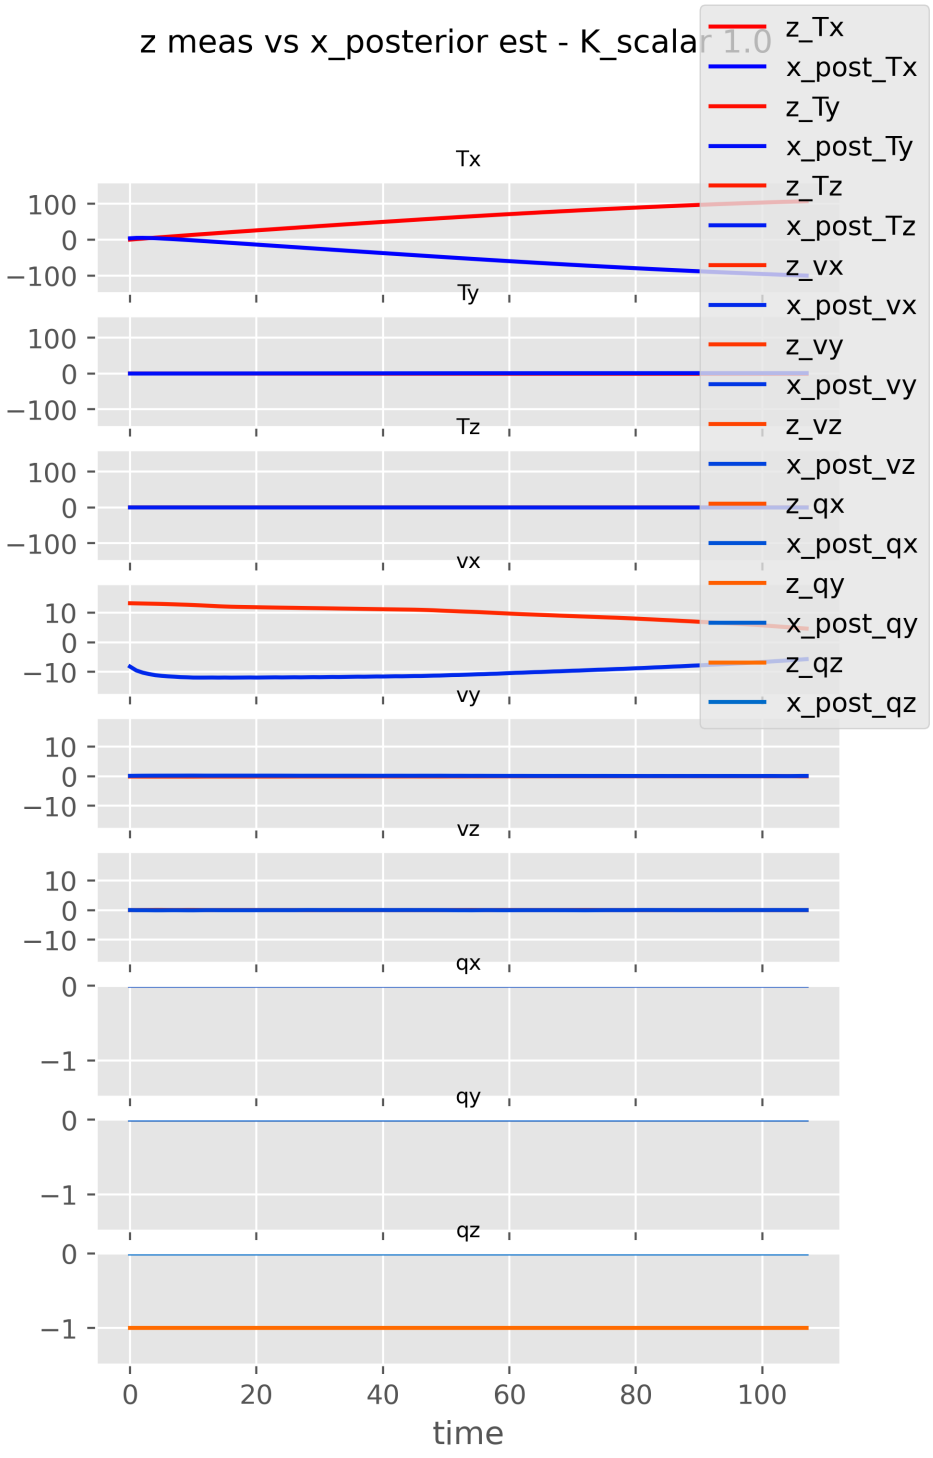

Figure 3: KITTI 001 - Measurement (z) vs Posterior Estimate (x-$post$).

- SD Team: No update.
- EE Autonobots: No update.

5 Immediate Plans - Summer 2021:

The following items are listed in the order of priority:

- UTARI: Dr. Gans' pose and velocity estimation paper.
- NBV-Grasping:
- Pose estimation: Survey paper.

6 Intermediate Goals - Fall 2021:

- Pose estimation: I must be finished with implementation, perhaps make some improvements, and should be working on a paper for ICRA or CVPR.
- Scene understanding and active learning: After pose estimation, I want to expand my research into scene understanding and active learning in the context of advanced manufacturing.
- ARIAC: Once I am up to speed, I will do the ARIAC workshops/tutorials and will talk to Jerry about possible contributions.
